AC Motor Controller with VCL

www.curtisinstruments.com
Superb Performance and Value

The Curtis Model AC F4-A Motor Controller provides accurate speed and torque control of 3-phase AC induction and PMAC motors.

The AC F4-A uses dual, high-performance ARM Cortex microprocessors to ensure the highest possible levels of functional safety, while providing highly efficient motor control and flexible system control capabilities. It is intended to control the Electric Traction (Propel), Hydraulic Pump and On-Engine Generator (OEG) Hybrid systems on mobile equipment applications such as Materials Handling Trucks, Aerial Work Platforms and Construction Equipment. In addition to the highly advanced motor control, the Model AC F4-A is also a powerful Vehicle Manager/System Controller, with significant CANbus system master capabilities.

FEATURES

Fit for Purpose

- High-efficiency, field-oriented motor control algorithms for 3-phase AC motors.
- Advanced motor control for maintaining optimal performance at all operating conditions.
- Provides real-time motor torque and power estimates for vehicle level power optimization.
- Compact, rugged housing with very small ‘footprint’ for its power rating.
- Heavy-duty M6 busbars for motor and battery connectors.
- Sealed, 35-pin AMPseal I/O connector.
- Impervious to most oils, solvents, degreasers and other chemicals often encountered by industrial vehicles.
- IP65 and IP67 environmental protection as per IEC 60529.
- Exceeds latest global conformance requirements for functional safety, electrical safety and EMC.
- CE marked as a programmable safety device.
- UL583 Pending.

Motors

- Easily configured to work with any AC induction or PMAC motor.
- Improved motor auto-characterization setup allows simple on-truck pairing with different Induction motor types.
- Comprehensive library of induction and PMAC motor types stored in controller memory.

You Feel It When You Drive It—
Maximum Torque, Minimum Losses, Full control

- The latest implementation of Curtis’ renowned field-oriented control algorithms, and our advanced PWM switching technology, assures maximum motor output torque and highest possible system efficiency across the entire torque/speed spectrum.
- Smooth and predictable drive control that only Curtis can deliver.
Get More Out of Your Battery—Regardless of the Technology

- High-efficiency means more of your battery’s energy is converted to motor output power.
- Fully configurable over-and under-voltage protection parameters.
- Wide operating voltage range allows use with the latest cell chemistries such as lithium ion.
- Configurable CANbus and VCL allows easy integration with the BMS (Battery Management Systems) typically found on Lithium battery packs.

Powerful, High Performance Dual Microprocessors

- Ultra-fast processor speeds allows highly accurate control and regulation of voltage, frequency and current.

Customize Your Vehicle with VCL

- The Curtis VCL (Vehicle Control Language) allows Curtis AC motor controllers to perform as ‘vehicle managers’ eliminating the need for costly, additional system controllers.

Inertial Measurement Unit (IMU)

- Six-Axis IMU for measurement of orientation, movement and impact detection (Optional).

Highly Flexible I/O

- All I/O pins are multi-function, and can be configured to provide up to:
  - 27 digital inputs
  - 9 analog inputs
  - 2 potentiometer sources
  - 7 output drivers

Comprehensive CAN Master Capabilities

- Configurable 11 or 29 bit protocol support for CANopen or J1939 use.
- Dual independent CAN ports, available with full galvanic isolation (option).
- ‘Plug and Play’ support for Curtis CAN displays and a variety of CAN tiller heads from leading manufacturers FREI and REMA.
- Fully compliant with CANopen protocol DS301 profile.
- Capable of acting as ‘CAN interpreter’ allowing 3rd party CAN devices with differing profiles to work on the same CAN network.

Improved Diagnostics

- Integrated, high visibility Status LED with simplified flash code sequence for at-a-glance system troubleshooting.
- Thermal cutback, warning, and automatic shutdown provide protection to motor and controller.
- Improved error logging and fault history tables with CAN Emergency Messages.

CAN-based Programming

- Model AC F4-A is programmable directly over the CANbus. This allows simpler ‘vehicle level’ communication with many of the CAN-based service tools in use by the major industrial truck manufacturers worldwide, or significantly, allows use of the Curtis Integrated Toolkit of development tools.
Curtis Model 3141
A cost-effective, CAN-based LCD vehicle status display in a rugged 52mm diameter housing is the ideal partner to model AC F4-A.

- Large, easy-to-read 16-segment format LCD.
- Battery Discharge Indicator, Service (Hours) Counter and Diagnostic/Message Center functions.
- Sealed to IP65, (IP67 optional).
- 12–48V nominal operating voltage range.
- CE compliant, UL583 recognized component.
- Optional backlight and heater.

The Curtis Integrated Toolkit
A fully integrated suite of development and diagnostic tools for use on CAN systems using Curtis and other 3rd party CAN-based products. It is comprised of the following tools that run in a shared environment:

- **Launchpad**
  Starting point and project editor.

- **Programmer**
  Similar in function to the 1314, used to configure parameters, view monitor values, and view the fault history.

- **TACT**
  Improved version of the stand-alone oscilloscope/datalogging tool.

- **VCL Studio**
  Editor and compiler for VCL software.

- **Menu Editor**
  Tool to create and modify programming menus.

- **Pack & Flash**
  Downloader tool to load you software into the CAN device.

The Curtis Integrated Toolkit is compatible with many leading USB>CAN interface dongles from Peak, Kvaser, iFAC, Sontheim etc. Contact your local Curtis Sales office for further information.
